LIGHTS FOR SIGNS

Greater Light, Lesser Light, and Ordered Stars — Album 112

GREATER LIGHT, LESSER LIGHT.
CORE TO CORONA.
SUNSPOT AND FLARE.
CME AND AURORA.
LASCO WHITE DOTS.
MOON PHASE CALCULATED.
ZODIAC AS BACKDROP.
FALSE GEOCENTRIC CLAIM.
HE CALLS THEM ALL BY NAME.

Lights for Signs

KJC-DNN / Remnant Christian Worship

Album 112 Song 1

Narrative- Greater Light, Lesser Light

God made the greater light to rule the day and the lesser light to rule the night (Genesis 1:16).

In the beginning God spoke light
And set the heavens in their place
The sun rose up to rule the day
The moon came forth with quiet grace

Greater light to rule the day
Lesser light to rule the night
Sun for day and moon for night
Stars for signs in ordered light

He hung the stars across the dark
Like silver words the skies could read
To mark the seasons and the years
To guide the hearts that watch and heed

Greater light to rule the day
Lesser light to rule the night
Sun for day and moon for night
Stars for signs in ordered light

When morning burns across the hills
And evening folds the fields in blue
The lights above still speak His name
The ordered heavens point to You

Greater light to rule the day
Lesser light to rule the night
Sun for day and moon for night
Stars for signs in ordered light

Poetic - Greater Light, Lesser Light

God made the greater light to rule the day and the lesser light to rule the night (Genesis 1:16).

God made the greater light to rule the day
And set the lesser light to rule the night
The sun pours fire across the open sky
The moon keeps watch beneath the softer light

Sun for day and moon for night
Stars for signs in ordered light
Heavens turning by His design
Greater light and lesser light

Morning wakes with a golden flame
Evening falls and the shadows rise
Silver moves on a quiet sea
Constellations gather in the skies

Every season finds its place
Every hour reflects His grace

Sun for day and moon for night
Stars for signs in ordered light
Heavens turning by His design
Greater light and lesser light

When the daylight fades away
Still His promise marks the way
When the dark is deep and wide
Moon and stars are burning signs

Sun for day and moon for night
Stars for signs in ordered light
Heavens turning by His design
Greater light and lesser light

Album 112 Song 2

Scientific - Core to Corona

Deep in the core, fusion wakes the light
Hydrogen burning, turning dark to bright
From the core outward, the energy climbs
Through the radiative zone, in measured time

Then the convective zone begins to rise
Heat rolls upward like a living tide
Toward the photosphere, where daylight shows
The Sun keeps singing, and the power flows

Core to corona, energy moves outward
Core to corona, blazing through the dark
Radiative zone, convective zone
Photosphere, chromosphere, corona
From open fields, the solar wind flows
Core to corona, and the whole world knows

The photosphere shines at the surface bright
The chromosphere glows in a crimson light
Above them, arches reach beyond the air
The corona burns in a silver flare

Open magnetic fields unfold and run
Carrying particles away from the Sun

The solar wind crosses the endless blue
A breath of fire sent from the core to you

Core to corona, energy moves outward
Core to corona, blazing through the dark
Radiative zone, convective zone
Photosphere, chromosphere, corona
From open fields, the solar wind flows
Core to corona, and the whole world knows

Teaching - Core to Corona

Deep in the core, fusion lights the flame
Hydrogen joins, and nothing stays the same
Energy starts its journey, moving out
Through the Sun’s bright layers, flowing out

From the hidden heart to the shining face
Every ray is traveling through space

Core to corona, the story unfolds
Radiative zone, where the energy rolls
Convective zone, where the hot currents flow
Photosphere shines, and the bright flames grow
Chromosphere rising, a red golden glow
Core to corona, watch the whole Sun show

In the radiative zone, photons make their way
Bumping through the darkness, day after day
In the convective zone, great currents rise
Carrying the energy toward the skies

Core to corona, the story unfolds
Radiative zone, where the energy rolls
Convective zone, where the hot currents flow
Photosphere shines, and the bright flames grow
Chromosphere rising, a red golden glow

Core to corona, watch the whole Sun show

Beyond the chromosphere, the corona gleams
A million mile crown, alive with streams
Through open fields, the solar wind flies
Energy outward, into the skies

Core to corona, the story unfolds
Radiative zone, where the energy rolls
Convective zone, where the hot currents flow
Photosphere shines, and the bright flames grow
Chromosphere rising, a red golden glow
Core to corona, watch the whole Sun show

Album 112 Song 3

Sunspot and Flare (Research)

Cooler magnetic regions fade into the dark
Sunspots mark the surface like a shifting map
Numbered active regions turn and rise
Tracking every cycle across the skies

Then the quiet breaks, the hidden currents spark
A sudden wave of energy lights the dark

Sunspot and flare, sunspot and flare
Dark in the daylight, fire in the air
X-ray strength tells us how bright they burn
Active regions show the cycle turn

Magnetic fields gather where the shadows grow
Holding back a power only stars can know
Then a flare breaks free in a burst of light
Racing through the silence of the solar night

From the smallest glow to the strongest blaze
We read the changing sun through numbered days

Sunspot and flare, sunspot and flare
Dark in the daylight, fire in the air

X-ray strength tells us how bright they burn
Active regions show the cycle turn

Count the regions, watch them move
Mark the rhythm, trace the groove
Every number, every scar
Maps the heartbeat of our star

Sunspot and flare, sunspot and flare
Dark in the daylight, fire in the air
X-ray strength tells us how bright they burn
Active regions show the cycle turn

Album 112 Song 4

CME and Aurora (Spoken Story)

A coronal mass ejection leaves the Sun
A wave of fire racing through the dark
Days pass by beneath the silent stars
Till Earth feels the pulse and sparks

Particles meet the magnetic field
The night begins to glow

Aurora, dancing at the edge of night
Aurora, rivers of green and light
From the Sun to Earth, the heavens turn
Aurora, watch the polar skies burn

Charged winds arrive from far away
They bend where Earth's blue shield is strong
They spiral down the polar air
And paint the dark with song

Particles meet the magnetic field
The night begins to glow

Aurora, dancing at the edge of night
Aurora, rivers of green and light

From the Sun to Earth, the heavens turn
Aurora, watch the polar skies burn

What began as fire across the Sun
Becomes a veil above the snow
A distant storm, a living light
The sky remembers where we go

Aurora, dancing at the edge of night
Aurora, rivers of green and light
From the Sun to Earth, the heavens turn
Aurora, watch the polar skies burn

Album 112 Song 5

LASCO White Dots (Teaching)

The occulting disk hides the bright Sun. Remaining white points are stars, planets, or detector hits—ordinary astronomy.

The occulting disk hides the bright Sun
Daylight fades behind its careful shield
White points remain in the dark
Tiny signals waiting to be revealed

Look closely, what do they show
Not every light is far away

White dots, white dots, crossing the night
Stars and planets, shining bright
White dots, white dots, ordinary signs
Or detector hits in the stream of light

Some are stars with ancient fire
Some are planets moving slow
Some are hits from the detector
Little marks that come and go

Look closely, what do they show
Not every light is far away

White dots, white dots, crossing the night

Stars and planets, shining bright
White dots, white dots, ordinary signs
Or detector hits in the stream of light

The Sun is hidden, not erased
The dark reveals a wider view
Astronomy in simple traces
Every point can still be true

White dots, white dots, crossing the night
Stars and planets, shining bright
White dots, white dots, ordinary signs
Or detector hits in the stream of light

Album 112 Song 6

Moon Phase Calculated (Scientific)

Phase follows the angle Sun–Earth–Moon. New, quarter, full—predictable from orbital geometry.

Moon phase calculated
By the turning of the sky
Sun and Earth and Moon align
In a measured dance of light

From the dark to growing bright
Every shape arrives in time

Phase follows the angle
Sun Earth Moon in line
New quarter full and changing
Predictable by orbital design
Moon phase calculated
Written in the geometry
Moon phase calculated
Moving through the night

New Moon hides its silver face
Quarter cuts the night in two
Full Moon floods the quiet Earth
Each one follows what the heavens do

Round and round the planets move
Every phase returns in time

Phase follows the angle
Sun Earth Moon in line
New quarter full and changing
Predictable by orbital design
Moon phase calculated
Written in the geometry
Moon phase calculated
Moving through the night

Album 112 Song 7

Zodiac as Backdrop (Poetic of actual orbit)

Constellations mark the path Earth travels yearly around the Sun. They are distant stars, not rulers.

Earth turns gently through the dark
Tracing one bright year around the Sun
Constellations mark the path
Distant fires where the road is drawn

They shine across the endless blue
But they do not steer what we become

Zodiac as backdrop
Stars above the road
Distant lights are watching
But they never hold the reins
Earth keeps moving onward
Following the Sun
Zodiac as backdrop
Not the rulers of our days

Aries waits beyond the dawn
Scorpio burns in midnight space
Names we gave to scattered stars
Still cannot bend the turning place

No fate is written in their glow
No hidden hand commands the sky
They mark the trail our planet knows
While we keep orbiting the light

Zodiac as backdrop
Stars above the road
Distant lights are watching
But they never hold the reins
Earth keeps moving onward
Following the Sun
Zodiac as backdrop
Not the rulers of our days

Album 112 Song 8

False Geocentric Claim (Problematic / Jest)

From the ground the Sun appears to move.
Measurement shows Earth turns and travels; the claim of a fixed center does not hold.

From the ground the Sun appears to move
Across the sky in a golden groove
But what we see is not the whole
The turning Earth keeps spinning slow

Measure the night, measure the day
Watch every shadow shift away
The evidence speaks, the old claim falls
No fixed center holds it all

False geocentric claim, it sounds so plain
The Sun seems to wander, but Earth turns again
False geocentric claim, let the numbers explain
Earth turns and travels through space again

The morning rises, the evening bends
The same bright journey starts and ends
Yet instruments trace the hidden flight
Earth rolls beneath the changing light

Measure the stars, measure the ground
Follow the motion going round
The evidence speaks, the old claim falls

No fixed center holds it all

False geocentric claim, it sounds so plain
The Sun seems to wander, but Earth turns again
False geocentric claim, let the numbers explain
Earth turns and travels through space again

Appearance can fool us, the sky can play
Perspective can paint the world this way
But truth gets clearer when questions remain
The center is moving, again and again

False geocentric claim, it sounds so plain
The Sun seems to wander, but Earth turns again
False geocentric claim, let the numbers explain
Earth turns and travels through space again

Album 112 Song 9

Song of Praise - He Calls Them All by Name

He determines the number of the stars and calls them each by name (Psalm 147:4). Instruments only read what He has set.

He determines the number of the stars
He knows their light, He knows where they are
Across the heavens, vast and wide
His steady hand is our guide

No star is lost, no light unknown
He calls the hidden worlds His own

He calls them all by name
He calls them all by name
Every star in the endless flame
He calls them all by name

The moon keeps watch at His command
The morning rises from His hand
The skies proclaim His wondrous ways
The earth responds with songs of praise

No voice is small, no heart unseen
His love reaches where we've been

He calls them all by name

He calls them all by name
Every star in the endless flame
He calls them all by name

The instruments only read what He has set
Every note obeys the song He wrote
Through every season, every breath
His perfect word is moving yet

He calls them all by name
He calls them all by name
Every star in the endless flame
He calls them all by name

He calls them all by name
He calls them all by name
Every heart beneath the heavens
He calls them all by name
